

FULLY FUNCTIONAL SECURED B2B BANKING SOLUTION

Our CCRIS B2B and Credit Scoring solutions are designed to mitigate FI's risks in credit facilities, and also to provide a new avenue to capture more customers.

Our experience shows that having a team that has actual implementation experience in delivering is best placed to provide realistic and achievable results.

Highlights:

- To achieve a faster turnaround time for loan approval process by storing credit report data into database and using credit scoring ability.
- To achieve more efficient method to update CCRIS on pending and approved applications.
- To reduce costs in retrieving credit reports by avoiding re-submission or redundant submission.
- To be able to perform reconciliation against BNM billings.
- To utilize CCRIS reports for business intelligence activities.
- To allow for future expansion to include CCRIS reporting for line management and portfolio review activities

CCRIS B2B

The design philosophy with our CCRIS B2B and Credit Scoring is to ensure maximum leverage its core strengths in credit reports. The analytic information based on the CCRIS credit report will enable FI to accelerate the preparation and processing of financial information, rapidly capture and organize relevant credit information, and achieve faster turnaround loan approval process. Also it allows FI to automate and optimize portfolio review, analyze internal and external risk factors and thus integrate policy planning and risk management.

Our application is developed with reliable security features, such as parameterized by authorized users and allows only the authorized users to access specific functions.

Also, security at application function, record and field level are also incorporated into our system. Any illegal attempts to access unauthorized application functions are logged. In the event of accessing to CCRIS BNM, the communication is further secured with a pre-registered iVEST Biz Client.
